Helping you measure
today so you can
manage your tomorrow

Take control anywhere, anytime, anyplace
Aspects energy monitoring software for even greater control of your energy

The more you know about energy usage in your buildings, the more you can look for energy-saving opportunities

Energy management is a growing practice among large companies. Successful energy management requires detailed information on how the energy is being used; however, this information is not available in facilities which are not actively being monitored. For proper energy management it is necessary for facility and buildings managers to understand how and where energy is being consumed.

Our Aspects energy management software in conjunction with our sub-metering, provide advanced solutions for monitoring and targeting, bill validation, contract analysis and financial forecasting.

The software will mitigate supplier over charges, improve management information and reduce internal manual administration costs.
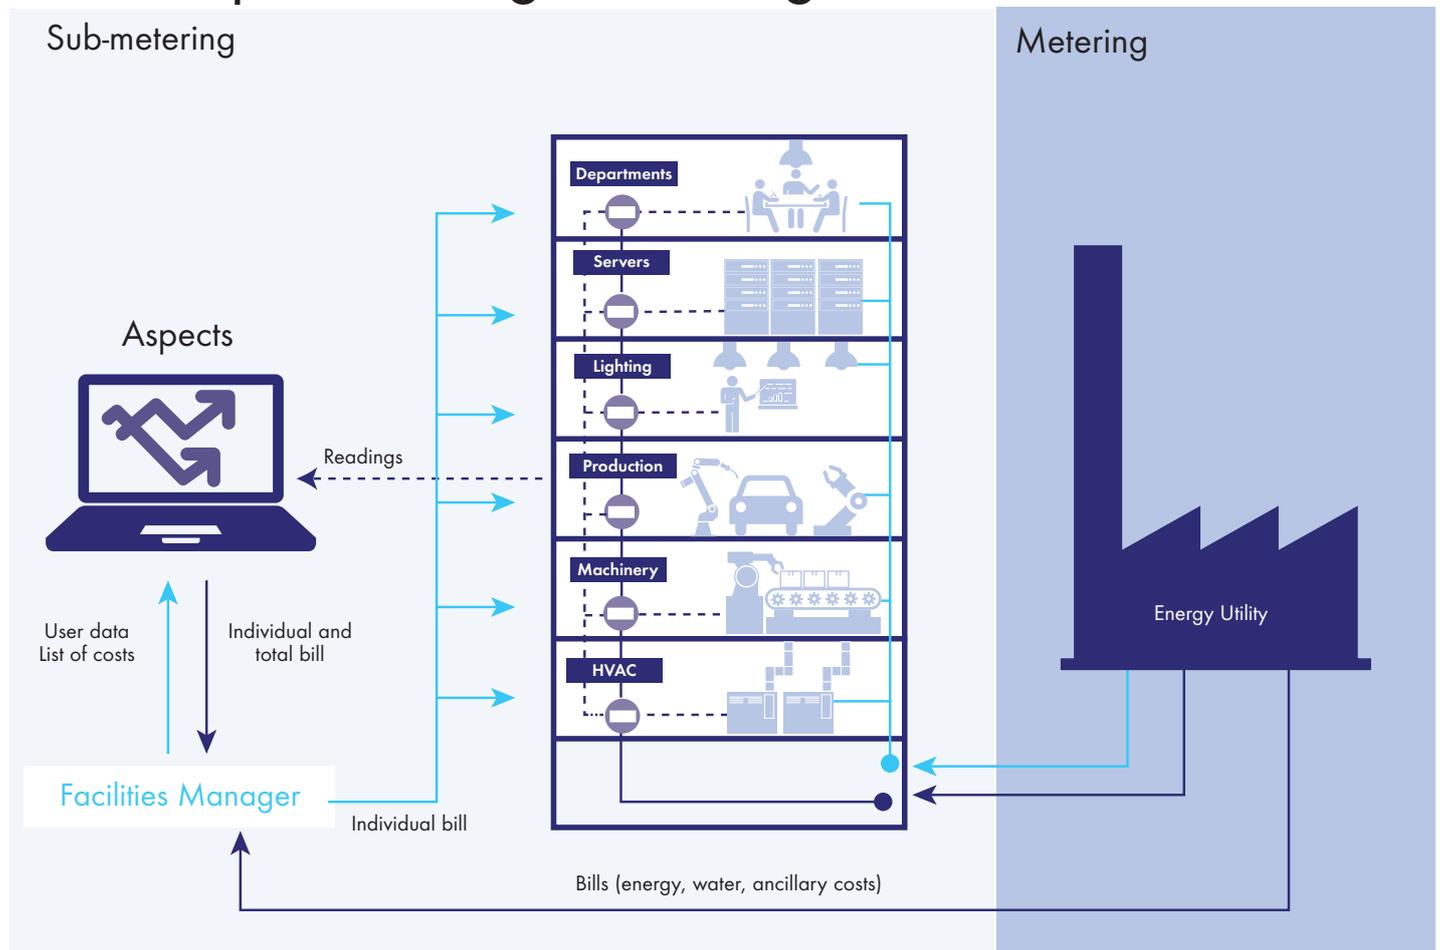

Aspects allows you to simplify every aspect of managing energy data and transform it into meaningful information through a suite of energy management software tools used to monitor, control, and optimise the performance of generation and transmission systems.

Add in the ability to export all data to spreadsheets via the CSV export function and it all adds up to the perfect solution for taking control of your facilities energy consumption.

How Aspects brings it all together

Sub-metering

Metering

Energy Utility

Bills (energy, water, ancillary costs)

Benefits for Building Managers:

Managing energy has always been a complex business, but today it's even more so: Energy contract renewals, carbon reduction programs, CRC, validating invoices, setting budgets, calculating accruals, AMR catering schemes.

Our advanced software features help to identify energy waste and allow you to have a greater understanding of your costs.

Our state-of-the-art technology along with outstanding customer support frees up more of your valuable time allowing you to take greater control of your operation.

Features include:

- 100% Cloud Based
- Customised Branding
- SSL Encryption
- Responsive UI
- Multiple Utilities
- Tablet Compatible

- Invoicing Functionality
- Multi- User Support
- Access From Anywhere
- Amazon Hosting
- Average Profiling
- Calendar View

- Alarms
- Automated Data Export
- Energy Dashboard
- HDMI Dongle
- CSV Data Export
- kW v Production
